

CLAIMS

What is claimed as invention is:

1. A carrier and storage apparatus for propane gas tanks, said carrier and storage  
5 apparatus comprising:

a shell member having a pair of shell halves, a base portion, a top portion,  
and a plurality of side portions;

stacking means for engaging said base portion with the top portion of a  
shell member placed below;

10 lateral nesting means for engaging at least one of said side portions with a  
side portion of an adjacent shell member;

hinge means for opening said shell halves to enclose a gas tank; and

fastener means for securing said shell halves together.

15 2. The carrier and storage apparatus of claim 1 wherein said top portion includes  
at least one opening defining a handle.

3. The carrier and storage apparatus of claim 1 wherein said hinge means  
comprises a living hinge.

20 4. The carrier and storage apparatus of claim 1 wherein said fastener means

comprises a releasable buckle.

5                   5. The carrier and storage apparatus of claim 1 wherein said stacking means  
comprises an interior rim on said base portion.

                  6. The carrier and storage apparatus of claim 1 wherein said lateral nesting means  
comprises a surface structure on at least one of said side portions.

10                  7. The carrier and storage apparatus of claim 1 wherein said lateral nesting means  
comprises a plurality of ribs on at least one of said side portions.

                  8. The carrier and storage apparatus of claim 1 wherein at least one of said side  
portions includes a generally planar surface area.

15                  9. The carrier and storage apparatus of claim 1 wherein said shell member tapers  
inwardly from all sides at said top portion.

                  10. The carrier and storage apparatus of claim 1 wherein said shell member tapers  
inwardly from all sides at said base portion.
